THE DUKE EXCLUSIVE

Join fellow alumni, family, and friends for an educational morning spent unlocking the secrets of the canine mind with evolutionary anthropologist and dog cognition expert, Brian Hare, at the Duke Canine Cognition Center (DCCC) on Duke's campus.

Established in 2009, the DCCC is the first dog research center on a college campus in the United States and is internationally recognized for the cutting edge studies investigating what goes on inside the minds of man's best friend.

Learn what your dog is thinking when they stare at you, what senses they rely on most, and whether they can read your mind. Bring every question you have ever had about your dog and learn how to develop a game that might lead to an answer. Of course, there will be adorable dogs that will help test your theories and demonstrate their abilities to leave you with a deeper understanding of dogs and the ways we can work best with them.

Programs begin and end at the Washington Duke Inn and run from 9:00 AM - 2:00 PM. Includes breakfast, lunch and tour.
